Lab 6: Arrays (Part 1)

Instructions

For this assignment, you will create a web application that will retrieve and display information about the world population. After reading “Chapter 5: Coding WorldExplorer to Explore the Population of the World”, start with the section titled ‘Creating the project’ using the skeleton code for the base project and complete through the section titled ‘Creating the service layer barrel’. Be sure your code compiles cleanly.

There is no Canvas submission for this project, you will submit your work to a GitHub repository as described below.

Submitting your work

Once your project is complete, commit your code along with a screen snip showing the compile operation to the provided classroom repository. Your instructor will clone and grade your repo after the due date for this assignment.

There is no Canvas submission for this project.
